

## Development of CO<sub>2</sub>-neutral drive systems

Climate-friendly fuels and alternative drive systems are being used in more and more vehicles. But what about environmentally friendly systems for sports yachts? So far, there are only few market-ready concepts for this. In order to advance the development of a CO<sub>2</sub>-neutral propulsion system for yachts, HanseYachts AG is participating in the Campfire Alliance, a basic research project that is to contribute to the development of the world's first yacht powered by a fuel cell. The system is to work with ammonia and the hydrogen bound there in nitrogen. To this end, a refuelling system, an emission-free engine and a system for on-board power supply must be developed using ammonia as the energy source.
